Birth event—baby resuscitation method

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	269410
Registration status:	Health! , Superseded 12/12/2018
Definition:	Active measures taken immediately after birth to establish independent respiration and heartbeat, or to treat depressed respiratory effort and to correct metabolic disturbances.
Context:	Perinatal

Object Class attributes

Identifying and definitional attributes

Object class:	Birth event
Definition:	The sequence of actions by which a baby and the afterbirth (placenta) are expelled or extracted from the uterus at childbirth. The process usually starts spontaneously about 280 days after conception with onset of labour, but it may be started by artificial means.
Specialisation of:	Life event

Source and reference attributes

Submitting organisation:	Australian Institute of Health and Welfare
Origin:	University of Oxford 2002. Concise Colour Medical Dictionary 3rd ed. UK: Oxford University Press

Property attributes

Identifying and definitional attributes

Property:	Baby resuscitation method
Definition:	The action taken for a baby to revive from apparent death or unconsciousness.
Property group:	Birth event
