# Birth—birth weight, total grams NNNN

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Element
<b>Short name:</b>	Infant weight, neonate, stillborn
<b>METEOR identifier:</b>	269938
<b>Registration status:</b>	<a href="#">Health!</a> , Superseded 02/08/2017 <a href="#">Tasmanian Health</a> , Superseded 03/07/2020
<b>Definition:</b>	The first weight, in grams, of the live-born or stillborn baby obtained after birth, or the weight of the neonate or infant on the date admitted if this is different from the date of birth.
<b>Data Element Concept:</b>	<a href="#">Birth—birth weight</a>
<b>Value Domain:</b>	<a href="#">Total grams NNNN</a>

## Value domain attributes

## Representational attributes

<b>Representation class:</b>	Total
<b>Data type:</b>	Number
<b>Format:</b>	NNNN
<b>Maximum character length:</b>	4
<b>Unit of measure:</b>	Gram (g)

## Data element attributes

## Collection and usage attributes

**Guide for use:** For [live births](#), [birthweight](#) should preferably be measured within the first hour of life before significant postnatal weight loss has occurred. While statistical tabulations include 500 g groupings for birthweight, weights should not be recorded in those groupings. The actual weight should be recorded to the degree of accuracy to which it is measured.

In perinatal collections the birthweight is to be provided for liveborn and stillborn babies.

Weight on the date the infant is admitted should be recorded if the weight is less than or equal to 9000g and age is less than 365 days.

## Source and reference attributes

**Origin:** National Health Data Committee

## Relational attributes

**Related metadata references:** Has been superseded by [Birth—birth weight, total grams NNNN](#)

## Specifications:

[Health!](#), Superseded 06/09/2006

**Implementation start date:** 01/07/2006

**Implementation end date:** 30/06/2007

**DSS specific information:**

For the provision of state and territory hospital data to Commonwealth agencies this metadata item must be consistent with diagnoses and procedure codes for valid grouping.

Weight is an important indicator of pregnancy outcome, is a major risk factor for neonatal morbidity and mortality and is required to analyse perinatal services for high-risk infants.

This metadata item is required to generate Australian National Diagnosis Related Groups.

### [Perinatal NMDS](#)
