Episode of admitted patient care—number of leave periods, total N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Number of leave periods
METEOR identifier:	270058
Registration status:	HealthI , Standard 01/03/2005 Tasmanian Health , Standard 27/04/2021
Definition:	Number of leave periods in a hospital stay (excluding one-day leave periods for admitted patients).
Data Element Concept:	Episode of admitted patient care—number of leave periods
Value Domain:	Total periods N[N]

Value domain attributes

Representational attributes

Representation class:	Total
Data type:	Number
Format:	N[N]
Maximum character length:	2
Unit of measure:	Period

Data element attributes

Collection and usage attributes

Guide for use:	If the period of leave is greater than seven days or the patient fails to return from leave, the patient is discharged.
Comments:	Recording of leave periods allows for the calculation of patient days excluding leave. This is important for analysis of costs per patient and for planning. The maximum limit allowed for leave affects admission and separation rates, particularly for long-stay patients who may have several leave periods. This data element was modified in July 1996 to exclude the previous differentiation between the psychiatric and other patients at the instigation of the National Mental Health Strategy Committee.
