# Establishment—number of individual session occasions of service for non-admitted patients (pathology), total N[NNNNNN]

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Element
<b>Short name:</b>	Individual sessions—pathology
<b>Synonymous names:</b>	Type of non-admitted patient care
<b>METEOR identifier:</b>	270505
<b>Registration status:</b>	<a href="#">Health!</a> , Standard 01/03/2005
<b>Definition:</b>	The total number of occasions of examination, consultation, treatment or other services provided as individual sessions to non-admitted patients in the pathology functional unit of an establishment. Each diagnostic test or simultaneous set of related diagnostic tests for the one patient referred to a hospital pathology department consists of one occasion of service.
<b>Data Element Concept:</b>	<a href="#">Establishment—number of individual session occasions of service for non-admitted patients</a>
<b>Value Domain:</b>	<a href="#">Total occasions of service N[NNNNNN]</a>

## Value domain attributes

## Representational attributes

<b>Representation class:</b>	Total
<b>Data type:</b>	Number
<b>Format:</b>	N[NNNNNN]
<b>Maximum character length:</b>	7
<b>Unit of measure:</b>	Occasion of service

## Data element attributes

## Collection and usage attributes

**Guide for use:**

For all occasions of service as individual sessions to non-admitted patients from designated pathology laboratories.

Occasions of service to all patients from other establishments should be counted separately.

This metadata item identifies types of services provided to non-admitted patients in different institutional ways in different systems. It is not a summary casemix classification.

A patient who first contacts the hospital and receives non-admitted care, for example through emergency departments, and is subsequently admitted, should have both components of care enumerated separately. Where possible, non-admitted occasions of service that are provided to patients who are subsequently admitted should be identified as a subset of the total occasions of service.

The list of Type of non-admitted patient care categories was to be developed using typical functional units or cost centres within existing institutions. These would include designated wards or departments and specialised clinics. Although the current statistical/financial returns submitted to the various health authorities by their hospitals do not provide a minimum subset, an effort has been made to define the categories in respect to those areas commonly collected. Many functional units provide services to both admitted patients and non-admitted patients, for example pathology. Only occasions of service for non-admitted patients should be included in this section.

**Collection methods:**

The definition does not distinguish case complexity for non-admitted patients.

For example, an occasion of service could vary in complexity from a simple urine glucose test to a complete biochemical analysis of all body fluids. Ideally, average case complexity values would be available for the various categories of non-admitted patients in the same way that average diagnosis related group weighted separations are becoming available for acute admitted patients. However, such measures would require the development of patient record databases for non-admitted patients. This does not imply an inadequacy in definition.

For admitted patients the concept of a [separation](#) is widely accepted. Separations can vary between admission for overnight observation to open heart surgery. The issue of case complexity for both admitted and non-admitted patients is a separate issue and beyond the scope of the proposed summary establishment-level activity data.
