Setting

Identifying and Definitional Attributes

Data Dictionary:

Knowledgebase ID: 000455   Version number: 0

Metadata type: DATA ELEMENT

Registration Authority: ANZTC   Admin status: DRAFT

Effective date: 07-APR-00

Definition: Type of facility at which a telehealth session is conducted.

Context: Telehealth. Helps track the diffusion of telehealth within and outside the public health system.

Relational and Representational Attributes

Datatype: Numeric

Representational form: CODE

Representation layout: N

Minimum Size: 1

Maximum Size: 1

Data Domain:
1	hospital
2	community health centre
3	multi-purpose centre
4	general practice
5	specialist practice
6	home
8	other

Guide For Use: Multi-Purpose Centres provide a collection of services, which are coordinated to meet the needs of rural and remote communities. MPC's serve as a base for a range of health and community based services such as hospital care, residential aged care (nursing home and hostel places), primary health care and paramedical services, and services for people able to live in the community with support.

Administrative Attributes

Source Document:

Source Organisation: The Australian New Zealand Telehealth Committee

Comments: This data item facilitates description of the type of facility at which telehealth is conducted.

In addition to this and the other Telehealth data elements identifiable as having ANZTC as "Source Organisation", the following
additional data elements are also associated with Telehealth:
- Area of usual residence,
- Date of birth,
- Sex,
- Geographical location of establishment,
- Person identifier, and
- Indigenous status.

Further details regarding Telehealth data definition and collection activity can be obtained from the Australian New Zealand Telehealth
Committee's web site at www.telehealth.org.au
