
Household family

Important note: This is an archived metadata standard from the AIHW Knowledgebase. For current metadata standards and related information please access METeOR, the AIHW's Metadata Online Registry at <http://meteor.aihw.gov.au>

Identifying and Definitional Attributes

Data Dictionary: NCSDD
Knowledgebase ID: 000854 Version number: 1
Metadata type: DATA ELEMENT CONCEPT
Admin status: SUPERSEDED Effective date: 01-MAR-05
Definition: Two or more persons, one of whom is at least 15 years of age, who are related by blood, marriage (registered or defacto), adoption, step or fostering, and who are usually resident in the same household.
Context: A person's family may form the central core of their support network. The basis of a family is formed by identifying the presence of a couple relationship, lone parent-child relationship or other blood relationship. A family may or may not live together and this co-residence may change over time. Related persons who live in other households may participate in the lives of family members they do not live with in a variety of ways, including financial, material, physical, emotional, legal and spiritual. For instance, frail older people may receive help from their adult children even though they do not live in the same household.
Nonetheless, the household family has been traditionally viewed as a building block of society and is the predominant unit reported statistically and historically.
Data on families, including co-resident families, are essential elements for the study of the well being of family groups and in this way for the study of the well being of individuals. They can be a tool indicating the type of and level of support to which a person has access.
