Reason for readmission following acute coronary syndrome episode code N[N]

Exported from METEOR (AIHW's Metadata Online Registry)

Reason for readmission following acute coronary syndrome episode code N[N]

Identifying and definitional attributes

Metadata item type:	Value Domain
METEOR identifier:	285169
Registration status:	Health!, Superseded 01/10/2008
Definition:	A code set representing the main reason for the **admission** following a previous discharge from an acute coronary syndrome episode.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N[N]
Maximum character length:	2

	Value	**Meaning**
Permissible values:	1	ST elevation myocardial infarction
	2	non-ST elevation ACS with high-risk features
	3	non-ST elevation ACS with intermediate-risk features
	4	non-ST elevation ACS with low-risk features
	5	Planned Percutaneous Coronary Intervention (PCI)
	6	Planned Coronary Artery Bypass Grafting (CABG)
	7	Heart Failure (without MI)
	8	Arrhythmia (without MI)
	9	Conduction disturbance (without MI)
	88	Non-cardiac cause
Supplementary values:	99	Not stated/inadequately described

Collection and usage attributes

Guide for use:	CODE 5 Planned Percutaneous Coronary Intervention (PCI)
	This code is used when a readmission and PCI is planned, i.e. not precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission with an associated PCI undertaken, one of codes 1-4 should be coded.
	CODE 6 Planned Coronary Artery Bypass Grafting (CABG)
	This code is used coded when a readmission and CABG is planned, i.e, not precipitated by a recurrent ischaemic event. If a recurrent ischaemic event precipitates a readmission with an associated CABG undertaken, one of codes 1-4 should be coded.
