Body functions code (ICF 2001) N[NNNN]

Identifying and definitional attributes

Metadata item type:	Value Domain
Synonymous names:	Body functions
METEOR identifier:	288336
Registration status:	Community Services (retired) , Superseded 16/10/2006
Definition:	A code set representing the Body Functions component of the International Classification of Functioning, Disability and Health (ICF 2001).
Context:	Human functioning and disability.

Representational attributes

Classification scheme:	International Classification of Functioning, Disability and Health 2001
Representation class:	Code
Data type:	Number
Format:	N[NNNN]
Maximum character length:	5

	Value	Meaning
Permissible values:	1	Mental functions
	2	Sensory functions and pain
	3	Voice and speech functions
	4	Functions of the cardiovascular, haematological, immunological and respiratory systems
	5	Functions of the digestive, metabolic and endocrine systems
	6	Genitourinary and reproductive functions
	7	Neuromusculoskeletal and movement-related functions
	8	Functions of the skin and related structures
Supplementary values:	The	above are ICF chapter headings. For 3, 4, and 5-digit codes under these chapter headings, please refer to the Body Functions component of the ICF.

Collection and usage attributes

Guide for use:

Body functions are the physiological functions of body systems (including psychological functions).

Body refers to the human organism as a whole; hence it includes the brain and its functions, that is, the mind.

The 'Body functions' classification is a neutral list of functions that can be used to record positive or neutral body function as well as impairment of body function.

'Impairments' of body functions are problems in body functions such as a loss or significant departure from population standards or averages.

This metadata item, in conjunction with [Impairment extent code X](#), enables the provision of information about the presence and extent of impairment for given body functions.

'Body functions' and 'Body structures' together represent one of the three components that define the concept '**Disability**'. 'Activities and participation' and 'Environmental factors' are the other two components.

Examples of the Permissible values listed in the *Body Functions* component of the ICF:

CODE 1 Mental functions

Global mental functions, specific mental functions.

CODE 2 Sensory functions and pain

Seeing and related functions, hearing and vestibular functions, additional sensory functions including pain.

CODE 3 Voice and speech functions

Functions of producing sounds and speech, such as articulation, fluency and rhythm.

CODE 4 Functions of the cardiovascular, haematological, immunological and respiratory systems

Functions of the cardiovascular system, functions of the haematological system, functions of the respiratory system.

CODE 5 Functions of the digestive, metabolic and the endocrine system

Functions related to the digestive system, functions relating to metabolism and the endocrine system.

CODE 6 Genitourinary and reproductive functions

Urinary functions, genital and reproductive functions.

CODE 7 Neuromusculoskeletal and movement-related functions

Functions of the joints and bones, muscle functions, movement functions.

CODE 8 Functions of the skin and related structures

Functions of the skin, functions of the hair and nails.

Collection Methods: Where multiple [body functions](#) or [impairments](#) of body functions are recorded, the following prioritising system should be useful.

- The first recorded body function or impairment of body function is the one having the greatest impact on the individual.
- Second and subsequent body function or impairment of body function are also of relevance to the individual.

The prefix **b** denotes the domains within the component of *Body Functions*.

Codes at the ICF chapter levels (i.e. single digit headings such as 'Mental functions') may be recorded. If further detail is required, the *Body Functions* component of the ICF provides 3, 4 and 5-digit codes. For example, in the Body Functions classification there are these codes:

b2 Sensory functions and pain

b210 Seeing functions

b2102 Quality of vision

b21022 Contrast sensitivity

In order to indicate the presence and extent in relation to a given body function, [Impairment extent code X](#), should also be recorded.

Comments: Multiple codes may be recorded.
