Disability grouping code N[N]

Identifying and definitional attributes

Metadata item type:	Value Domain
Synonymous names:	Disability grouping
METEOR identifier:	288384
Registration status:	Community Services (retired) , Superseded 08/05/2006
Definition:	A code set representing disability groupings .
Context:	Human functioning and disability.

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N[N]
Maximum character length:	2

	Value	Meaning
Permissible values:	1	Intellectual/learning
	11	Developmental delay
	12	Intellectual
	13	Specific learning/ADD
	14	Autism
	2	Psychiatric
	3	Sensory/speech
	31	Deafblind (dual sensory)
	32	Vision (sensory)
	33	Hearing (sensory)
	34	Speech
	4	Physical/diverse
	41	Physical
	42	Acquired brain injury
	43	Neurological
Supplementary values:	99	Disability group not yet classified

Collection and usage attributes

Guide for use: [Disability groupings](#) constitute a broad categorisation of disabilities in terms of the underlying health condition, impairment, activity limitations, participation restrictions, environmental factors and support needs. The grouping that most clearly expresses the experience of disability of a person.

[Disability](#) is the umbrella term for any or all of: an [impairment of body structure](#) or [function](#), a limitation in activities, or a restriction in [participation](#). Disability is defined in terms of three components: 'Body functions and structures', 'Activities and Participation' and 'Environmental factors'.

This metadata item may be used as a basis for the broad description of similar experiences of disability and patterns of impairments, [activity](#) limitations,

participation restrictions, support needs and related health conditions. 'Disability group' is not a diagnostic grouping, and there is not a one-to-one correspondence between a health condition and a disability group. Where a precise diagnosis is to be recorded, [Episode of care—principal diagnosis, code \(ICD-10-AM 3rd edn\) ANN{,N\[N\]}](#) and [Episode of care—additional diagnosis, code \(ICD-10-AM 3rd edn\) ANN{,N\[N\]}](#) may be used. The collection of data on disability-related metadata items and diagnosis, together, allows the relationship of the components of disability and related health conditions to be more thoroughly explored.

Consumer groups, service providers and governments may use these groupings to make national and international comparisons.

The higher level grouping below, represented by the four terms: 'intellectual', 'psychiatric' 'sensory' and 'physical', is used in many of the international categorisations of disability, for instance the Standard Rules on the Equalization of Opportunities for Persons with Disabilities endorsed by the United Nations in 1994. The more detailed grouping below reflects terms used nationally in Australia by peak bodies, people with disabilities and by disability administrations. It is used in the main administrative data collection in the Australian disability services sector (i.e. the Commonwealth State/Territory Disability Agreement National Minimum Data Set (CSTDA NMDS)). The two levels of grouping are included in this metadata item to facilitate national and international comparisons.

The experience of disability is complex and multi-dimensional. It can be described using impairments of structure and/or function, patterns of activity limitation, participation restrictions, environmental factors and support needs.

Each of these dimensions can inform the decision on which group to use.

CODE 1 Intellectual/learning disability

Is associated with impairment of intellectual functions with limitations in a range of daily activities and restriction in participation in a range of life areas. Supports may be needed throughout life, the level of support tends to be consistent over a period of time but may change in association with changes in life circumstances. This grouping includes:

CODE 11 Developmental delay

Is applicable to children aged 0-5 only. Conditions appearing in the early developmental period, with no specific diagnosis.

CODE 12 Intellectual disability

Applies to conditions appearing in the developmental period (age 0-18) associated with impairment of mental functions, difficulties in learning and performing certain daily life skills and limitation of adaptive skills in the context of community environments compared to others of the same age. Intellectual disability may be associated with Down Syndrome, tuberous sclerosis, cri-du-chat syndrome etc.

CODE 13 Specific learning

Is a general term referring to a group of disorders, presumed due to central nervous system dysfunction rather than an intellectual disability, covering significant difficulties in the acquisition and use of listening, speaking, reading, writing, reasoning or mathematical skills. Specific learning may be associated with Attention Deficit Disorder.

CODE 14 Autism

Is used to describe pervasive developmental disorder involving disturbances in cognition, interpersonal communication, social interactions and behaviour (in particular obsessional, ritualistic, stereotyped and rigid behaviours).

CODE 2 Psychiatric disability

Is associated with clinically recognisable symptoms and behaviour patterns frequently associated with distress that may impair personal **functioning** in normal social activity. Impairments of global or specific mental functions may be experienced, with associated activity limitations and participation restrictions in a

range of areas. Supports needed may vary in range, and may be required with intermittent intensity during the course of the condition. Change in level of supports tends to be related to changes in the extent of impairment and the environment. Psychiatric disability may be associated with schizophrenias, affective disorders, anxiety disorders, addictive behaviours personality disorders, stress, psychosis, depression and adjustment disorders.

CODE 3 Sensory/speech disability includes

Is associated with impairment of the eye, ear and related structures and of speech, structures and functions. Extent of impairment, and activity limitation may remain consistent for long periods. Activity limitations may occur in a range of areas, for instance communication and mobility.

Availability of a specific range of environmental factors will affect the level of disability experienced by people in this grouping. Once in place, the level of support tends to be relatively consistent. This grouping includes:

CODE 31 Deafblind

Is used to describe dual sensory impairments causing severe restrictions in communication, and in the ability to participate in community life.

CODE 32 Vision disability

Encompasses blindness and vision impairment (not corrected by glasses or contact lenses), which can cause severe restrictions in communication, and in the ability to participate in community life.

CODE 33 Hearing disability

Encompasses deafness, hearing impairment, and hearing loss, which can cause severe restrictions in communication, and in the ability to participate in community life.

CODE 34 Speech disability

Encompasses speech loss, impairment and/or difficulty in communication which can cause severe restrictions in communication, and in the ability to participate in community life.

CODE 4 Physical/diverse disability

Is associated with the presence of an impairment, which may have diverse effects within and among individuals, including effects on physical activities such as mobility. The range and extent of activity limitation and participation restriction will vary with the extent of impairment and the environment. Environmental factors and support needs are related to areas of activity limitation and participation restriction, and may be required for long periods. Level of supports may vary with both life changes and extent of impairment. This grouping includes:

CODE 41 Physical disability

Is used to describe conditions that are attributable to a physical cause or impact on the ability to perform physical activities, such as mobility. Physical disability includes paraplegia, quadriplegia, muscular dystrophy, motor neurone disease, neuromuscular disorders, cerebral palsy, absence or deformities of limbs, spina bifida, arthritis, back disorders, ataxia, bone formation or degeneration, scoliosis etc.

Impairments may affect internal organs such as lung or liver.

CODE 42 Acquired brain injury

Is used to describe multiple disabilities arising from damage to the brain acquired after birth. It can occur as a result of accidents, stroke, brain tumours, infection, poisoning, lack of oxygen, degenerative neurological disease etc. Effects include deterioration in cognitive, physical, emotional or independent functioning.

CODE 43 Neurological disability

Applies to impairments of the nervous system occurring after birth, and may be

associated with such conditions as epilepsy, organic dementias (e.g. Alzheimer's disease), multiple sclerosis and Parkinson's disease.

Collection Methods:

Data collections may collect at the higher level of detail or the lower level of detail. However, it is important that the two levels of classification can be mapped to each other.

Specific collections may require information on all disabilities of a person, on only one primary disability or on both. The definition of 'primary disability group' used in the Commonwealth State/Territory Disability Agreement National Minimum Data Set is 'the disability group causing the most overall difficulty to the person in their daily life'.
