### Collection and usage attributes

<b>Comments:</b>	Hormone receptor status is an important prognostic indicator for breast cancer.  The Australian Cancer Network Working Party established to develop guidelines for the pathology reporting of breast cancer recommends that hormone receptor assays be performed on all cases of invasive breast carcinoma. The report should include <ul style="list-style-type: none"><li>• the percentage of nuclei staining positive and the predominant staining intensity (low, medium, high) and</li><li>• a conclusion as to whether the assay is positive or negative.</li></ul>
