Person—dyslipidaemia treatment with anti-lipid medication indicator

Identifying and definitional attributes

Metadata item type:	Data Element Concept
METEOR identifier:	304485
Registration status:	HealthI , Standard 21/09/2005
Definition:	Whether an individual is being treated for dyslipidaemia (abnormal lipid levels) using anti-lipid medication.

Object Class attributes

Identifying and definitional attributes

Object class:	Person
Definition:	A human being.

Collection and usage attributes

Comments:	Prior to 13 March 2018, the definition of the 'Person' Object class was 'A human being, whether man, woman or child'. From 13 March 2018, the definition was edited by removing the words '...whether man, woman or child' so that a person is defined as 'A human being'. This amendment was undertaken to align the definition of a person with the <i>Australian Government Guidelines on the Recognition of Sex and Gender</i> and the Australian Bureau of Statistics (ABS) <i>Standard for Sex and Gender Variables</i> , which recognise that there are sex and gender types that are not exclusively male or female.

Data element concept attributes

Collection and usage attributes

Comments: Dyslipidaemia is an excessive accumulation of one or more of the major lipids transported in plasma. Plasma lipid levels may be reduced by a variety of agents having different mechanisms of action. They also have different effects on the plasma lipid profile.
