Person—weight (measured), total grams NNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Weight in grams (measured)
Synonymous names:	Infant weight, neonate, stillborn
METEOR identifier:	310245
Registration status:	Health! , Standard 01/03/2005 Tasmanian Health , Standard 05/09/2016
Definition:	The weight (body mass) of a person measured in grams.

Data element concept attributes

Identifying and definitional attributes

Data element concept:	Person—weight
METEOR identifier:	269672
Registration status:	Health! , Standard 01/03/2005 Tasmanian Health , Standard 05/09/2016
Definition:	The body mass of a person.
Context:	Public health and health care:

Weight is an overall measure of body size that does not distinguish between fat and muscle. Weight is an indicator of nutrition status and health status. Low pre-pregnancy weight is an indicator of poorer gestational outcome in women (Kramer 1988). Low weight is also associated with osteoporosis. In general, change in weight is of interest in adults because it is an indicator of changing health status. Self reported or parentally reported weight for children and adolescents should be used cautiously if at all. It enables the calculation of body mass index which requires the measurement of height and weight (body mass) for adults.

Object class:	Person
Property:	Weight

Value domain attributes

Identifying and definitional attributes

Value domain:	Total grams NNNN
METEOR identifier:	270564
Registration status:	Health! , Standard 01/03/2005 Tasmanian Health , Standard 05/09/2016
Definition:	Total number of grams.

Representational attributes

Representation class:	Total
Data type:	Number
Format:	NNNN
Maximum character length:	4

Unit of measure: Gram (g)

Data element attributes

Source and reference attributes
