Person—respiratory rate, total breaths per minute N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Respiratory rate
METEOR identifier:	320673
Registration status:	Health! , Recorded 14/07/2006
Definition:	The total number of breaths a person takes per minute.
Data Element Concept:	Person—respiratory rate
Value Domain:	Total breaths per minute N[N]

Value domain attributes

Representational attributes

Representation class:	Total				
Data type:	Number				
Format:	N[N]				
Maximum character length:	2				
Supplementary values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>99</td><td>Not stated/inadequately described</td></tr></tbody></table>	Value	Meaning	99	Not stated/inadequately described
Value	Meaning				
99	Not stated/inadequately described				

Data element attributes

Collection and usage attributes

Guide for use:	For a ventilated patient, the respiratory rate is the combined total of patient and ventilator breaths per minute. For a non-ventilated patient, the respiratory rate is the number of unassisted breaths per minute.

Relational attributes

DSS specific information:

If the patient suffers a cardiorespiratory arrest or death in the first 24 hours, the values recorded should be the lowest measured values prior to arrest or death. It is inappropriate to record a variable as zero merely because cardiorespiratory arrest or death has occurred. Where an automated monitoring system is being employed then values on the preceding hour pre-arrest should be considered in the selection of the lowest (worst available) value. e.g. if arrest occurs at 11:35am, then consider substituting values corresponding to 11:00am.

Used in the calculation of APACHE II and APACHE III scores.

APACHE II

For the calculation of the APACHE II score, the highest and lowest respiratory rates in the first 24 hours are collected and then scored using the following APACHE II weight scoring system. For the calculation of the APACHE II score, the highest score is used.

High abnormal range						Low abnormal range			
+4	+3	+2	+1	0	+1	+2	+3	+4	
≥50	35-49		25-34	12-24	10-11	6-9		≤5	

APACHE III

For the calculation of the APACHE III score, the highest and lowest respiratory rates in the first 24 hours are collected and then scored using the following APACHE III weight scoring system. For the calculation of the APACHE III score, the highest score is used. For mechanically ventilated patients, no points are given for respiratory rate 6 – 12.

High abnormal range						Low abnormal range		
+18	+11	+9	+6	0	+7	+8	+17	
≥50	40-49	35-39	25-34	14-24	12-13	6-11	≤5
