Person—urine output 24 hours, millilitres NNNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Urine output (24 hours)
METEOR identifier:	320740
Registration status:	Health! , Recorded 14/07/2006
Definition:	The person's total urine output over 24 hours measured in millilitres.
Data Element Concept:	Person—urine output 24 hours
Value Domain:	Millilitres NNNNN

Value domain attributes

Representational attributes

Representation class:	Total				
Data type:	Number				
Format:	NNNNN				
Maximum character length:	5				
Supplementary values:	<table><thead><tr><th>Value</th><th>Meaning</th></tr></thead><tbody><tr><td>99999</td><td>Not stated/inadequately described</td></tr></tbody></table>	Value	Meaning	99999	Not stated/inadequately described
Value	Meaning				
99999	Not stated/inadequately described				
Proposed unit of measure:	Millilitres

Implementation in Data Set [Intensive care DSS](#)
Specifications: [Health!](#), Recorded 14/07/2006
DSS specific information:

The total urine output is recorded for the first 24 hours in intensive care. If there is an incomplete 24 hour urine collection, extrapolate to report a 24 hour urine output. If however, the urine collected is for a period of ≤ 6 hours or the patient is terminal, leave the information out and it will be treated as unknown, i.e. normal.

Urine output forms part of the definition for acute renal failure. Acute renal failure doubles the weighting of points allocated to the creatinine value in the APACHE II and APACHE III scoring systems. Urine output is also required for the SAPS II scoring system algorithm.
