Clinical intervention

Identifying and definitional attributes

Metadata item type: Glossary Item

METEOR identifier: 327220

Registration status: [Health!, Standard 01/03/2005](#)
[Tasmanian Health, Standard 02/09/2016](#)

Definition: An intervention carried out to improve, maintain or assess the health of a person, in a clinical situation.

Context: Health services:

Information about the surgical and non-surgical interventions provides the basis for analysis of health service usage, especially in relation to specialised resources, for example theatres and equipment or human resources.

Collection and usage attributes

Comments: Clinical interventions include invasive and non-invasive procedures, and cognitive interventions.

Invasive:

(a) Therapeutic interventions where there is a disruption of the epithelial lining generally, but not exclusively, with an implied closure of an incision (e.g. operations such as cholecystectomy or administration of a chemotherapeutic drug through a vascular access device);

(b) Diagnostic interventions where an incision is required and/or a body cavity is entered (e.g. laparoscopy with/without biopsy, bone marrow aspiration).

Non-invasive:

Therapeutic or diagnostic interventions undertaken without disruption of an epithelial lining (e.g. lithotripsy, hyperbaric oxygenation; allied health interventions such as hydrotherapy; diagnostic interventions not requiring an incision or entry into a body part such as pelvic ultrasound, diagnostic imaging).

Cognitive:

An intervention which requires cognitive skills such as evaluating, advising, planning (e.g. dietary education, physiotherapy assessment, crisis intervention, bereavement counselling).
