Representational attributes

Representation class:	Total	
Data type:	Number	
Format:	NN[N]	
Maximum character length:	3	
	Value	Meaning
Supplementary values:	999	Not stated/inadequately described

Data element attributes

Collection and usage attributes

Guide for use:	Is the total number of distinct episodes of anginal pain that occurred in the 24 hours preceding presentation to the hospital, including the current episode for which the person presented to hospital. An episode of angina may include chest pain (which may spread to either or both shoulders, the back, neck, jaws or down the arm) or overwhelming shortness of breath.
Collection methods:	Ask the individual how many distinct episodes of anginal pain he/she experienced in the 24 hours preceding presentation to hospital, including the current episode. Alternatively, if available, obtain this information from appropriate documentation.
