organisation.

Data Element Concept: Service provider organisation—number of escapes

Value Domain: <u>Total escapes N[NN]</u>

Value domain attributes

Representational attributes

Representation class: Total

Data type:NumberFormat:N[NN]

Maximum character length: 3

Proposed unit of measure: Escapes

Data element attributes

Collection and usage attributes

Guide for use: This data standard should count the total number of successful escapes in a set 12

month period. This is a count of the number of individuals involved in an incident of escape. For example, if three people escape in one incident, this will be counted as three. In addition, if an individual escapes multiple times, they should be counted

for each escape.

Collection methods: This data standard is implemented two times in the Juvenile Justice NMDS. It is

collected for the following items:

Number of escapes from secure perimeter

 the total number of successful escapes from within a secure perimeter of a remand/detention centre by clients who are under the supervision of the centre;
Note: escapes whilst on leave or whilst in transportation should not be included in

this count.

Number of escapes from other legal custody

• the total number of successful escapes from legal custody (other than from within the secure perimeter of a remand/detention centre) by clients who are under direct,

physical supervision of the centre.

Note: escapes whilst on escorted leave should be included.

Comments: Escapes are of interest to jurisdictions as one possible indicator of the

effectiveness of centres.
