# **Breast cancer (Cancer registries) DSS**

### Identifying and definitional attributes

Metadata item type: Data Set Specification

METEOR identifier: 370008

Registration status: Health!, Superseded 01/09/2012

DSS type: Data Set Specification (DSS)

Scope: This breast cancer data set is not mandated for collection but is recommended as

best practice if breast cancer data are to be collected.

The data set would allow common, consistent and high quality breast cancer data to be collected by State and Territory cancer registries and collated nationally.

This data will help inform research, policy, planning and guideline development

work in the breast cancer area.

Breast cancer may be used as a forerunner for other cancers in terms of

establishing common data collections across cancer registries.

This data set includes 20 items, with the inclusion of five new standards and the

addition of further detail to several existing standards.

## Collection and usage attributes

**Guide for use:** Report each of the data elements in this data set once, and in no particular order.

Collection methods: State and Territory cancer registries collect data on incidence and annually report

data to the Australian Institute of Health and Welfare.
