National Healthcare Agreement: P21-Treatment rates for mental illness, 2010

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	Treatment rates for mental illness, 2010
METEOR identifier:	394710
Registration status:	Health! , Superseded 08/06/2011
Description:	Proportion of population receiving clinical mental health services.
Indicator set:	National Healthcare Agreement (2010) Health! , Superseded 08/06/2011
Outcome area:	Primary and Community Health Health! , Standard 07/07/2010
Data quality statement:	National Healthcare Agreement: P21-Treatment rates for mental illness, 2010 QS Health! , Superseded 08/06/2011

Collection and usage attributes

Computation:	100 x (Numerator ÷ Denominator) Calculated separately for public, private and Medicare Benefits Schedule (MBS) funded services. Rates are directly age-standardised to the Australian population as at 30 June 2001.
Numerator:	Number of people receiving clinical mental health services

Numerator data elements:

Data source type: Administrative by-product data
Used for disaggregation by remoteness area and SEIFA of residence

Comments:

Specified disaggregation:

Public: Nationally and by state/territory (of establishment): by 10 year age group, Indigenous status, remoteness area, and SEIFA of residence.

Private: Nationally and by state/territory (of establishment): by 10 year age group, Indigenous status, remoteness area, and SEIFA of residence.

MBS: Nationally and by state/territory (of patient's residence): by 10 year age group, Indigenous status, remoteness area, and SEIFA of residence.

Available disaggregation:

Public: Nationally and by state/territory (of establishment): by 10 year age group, Indigenous status, remoteness area, and SEIFA of residence.

Private: Nationally and by state/territory (of establishment): by 10 year age group, remoteness area, and SEIFA of residence.

MBS: Nationally and by state/territory (of patient's residence): by 10 year age group, remoteness area, and SEIFA of residence.

Data for 2008-09 will be available by June 2010.

Most recent data available for 2010 CRC baseline report: 2007-08

Accountability attributes

Reporting requirements: National Healthcare Agreement

Organisation responsible for providing data: Australian Institute of Health and Welfare

Further data development / collection required: Specification: Proxy

A small number of persons receiving mental health treatment are not captured in the proposed data sources. These include:

- individuals receiving only admitted and/or residential services from state and territory public sector specialised mental health services
- individuals receiving mental health services (other than as admitted patients in private hospitals) funded through the Department of Veterans' Affairs (DVA), other third party funders (e.g. transport accident insurers, workers compensation insurers, crime compensation) or out of pocket sources.

Further work will be undertaken to extend the coverage to DVA-funded activities and to public sector admitted and residential services. The potential to include non-admitted services funded by third party funders and out-of-pocket sources will be explored but is not likely to be feasible in the short term.

Non-duplicated person count. To estimate the number receiving 'one or more' mental health services from administrative data, a non-duplicated person count would be required (e.g. through inclusion of a unique identifier or statistical linkage key or similar).

Ability to identify persons treated. People who are assessed for a mental health service but do not go on to be treated for a mental illness are included in the data submissions of a number of jurisdictions to the Community mental health care (CMHC) NMDS. It is proposed that work is undertaken to amend the data definitions in the CMHC NMDS to allow the identification of people who are assessed but not treated.

Indigenous identification needs improvement in each of the administrative datasets used in this measure.

Other issues caveats: There is likely to be considerable overlap between the MBS data and the private hospital data, as most patients accessing private hospital services would access MBS items in association with the private hospital service. There is also likely to be some double counting of consumers receiving public and MBS-funded services.
