Person with cancer—primary tumour status, T stage (UICC TNM Classification of Malignant Tumours, 7th ed) code X[XXX]

Identifying and definitional attributes

Metadata item type: Data Element

Short name: Cancer staging—T stage code

METEOR identifier: 403564

Registration status: Health!, Standard 07/12/2011

Definition: The size and extent of the primary tumour in a person with cancer, as represented

by a code.

Data element concept attributes

Identifying and definitional attributes

Data element concept: Person with cancer—primary tumour status

METEOR identifier: 416006

Registration status: Health!, Standard 07/12/2011

Definition: The size and extent of the primary tumour in a person with cancer.

Object class: Person with cancer
Property: Primary tumour status

Value domain attributes

Identifying and definitional attributes

Value domain: T stage (UICC TNM Classification of Malignant Tumours, 7th ed) code X[XXX]

METEOR identifier: 403567

Registration status: Health!, Standard 07/12/2011

Definition: The International Union Against Cancer (UICC) TNM Classification of Malignant

Tumours code set representing the size and extent of the primary tumour.

Representational attributes

Classification scheme: International Union against Cancer (UICC) TNM Classification of Malignant

Tumours 7th edition

Representation class:CodeData type:StringFormat:X[XXX]

Maximum character length: 4

Value Meaning

Supplementary values: 9997 Not applicable

9998 Unknown

9999 Not stated/inadequately described

Collection and usage attributes

Guide for use: Valid T codes from the current edition of the UICC TNM Classification of Malignant

Tumours.

Record the stage in Arabic numerals and the appropriate upper or lower case alphabetic character omitting the prefix "T". For example, record stage T2a for lung

cancer as "2a".

Record if the T stage value has a prefix of "c" or "p"; for example, record

retinoblastoma T stage pT2b as "p2b".

Refer to the TNM Supplement: A Commentary on Uniform Use, 3rd Edition for

coding rules.

Source and reference attributes

Reference documents: Wittekind C et al (Editors) 2003. International Union Against Cancer (UICC): TNM

supplement: A commentary on uniform use, 3rd edition. Wiley-Blackwell.

Data element attributes

Collection and usage attributes

Guide for use: Record the size and extent of the primary tumour at the time of diagnosis of the

cancer.

TNM staging applies to solid tumours excluding brain tumours.

Choose the lower (less advanced) T category when there is any uncertainty.

The T stage value is derived from the size of the tumour and its relationship (extension) to other structures. The size is reflected in the value of data element *Person with cancer—solid tumour size (at diagnosis), total millimetres NNN*; the

usage attributes provide additional detail.

The extent of the primary cancer at diagnosis is usually recorded. An exception is malignant melanoma of the skin; by convention T stage is recorded after tumour excision and is based on tumour thickness with T subcategories based on ulceration and the number of mitoses seen. Ovarian cancer is also

surgically/pathologically staged.

The current edition of the American Joint Committee on Cancer (AJCC) Cancer Staging Manual provides an equivalent and alternative source of T stage codes.

Staging classification systems other than the TNM classification system are

recorded separately.

Collection methods: This information should be obtained from the patient's medical record.

Comments: Cancer stage is an important determinant of treatment and prognosis, and is used

to evaluate new treatments and analyse outcomes. Survival analysis is adjusted by

stage at diagnosis and distribution of cancer cases by type and stage.
