Establishment—service unit cluster name, text XXX[X(97)]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Service unit cluster name
METEOR identifier:	409209
Registration status:	Health!, Standard 07/12/2011 Independent Hospital Pricing Authority, Qualified 23/11/2015
Definition:	The appellation by which a service unit cluster, which groups specialised mental health ambulatory and residential service units, is known or called, as represented by text.
Data Element Concept:	Establishment—service unit cluster name
Value Domain:	Text XXX[X(97)]

Guide for use:

A [Specialised mental health service organisation](#) may consist of one or more clusters of service units providing services in admitted patient, residential and ambulatory settings. For example, a *Specialised mental health service organisation* may consist of several hospitals (clusters of admitted patient service units) and/or ambulatory or residential service unit clusters (for example, a cluster of child and adolescent ambulatory service units, and a cluster of aged residential service units).

To allow service units to be individually identified, but still also to be identified as part of a hospital (for the admitted patient service setting), or as part of another type of cluster (e.g. other cluster types for ambulatory or residential service setting), a separate reporting level called *Hospital* for admitted patient service units and *Service unit cluster* for ambulatory service units and residential service units is necessary.

The concept of *Service unit cluster* only applies to ambulatory and residential service units. The equivalent entity for the grouping of admitted patient service units is the *Hospital*.

However, for some ambulatory service units, the service unit may 'belong' to a hospital that contains both admitted patient and ambulatory service units. In this instance, the service unit cluster identifier for the ambulatory service unit would be the *Hospital identifier*. Other groups of ambulatory and residential service units could also be usefully identified as clusters. For example, clusters may exist of groups of residential services for aged persons, or groups of ambulatory service units in particular geographical areas.

Where there is no Service unit cluster, then the Service unit cluster name would be the relevant organisation name.

The Service unit cluster name should be unique for the cluster in that state/territory. Service unit reporting structures should be identical between all mental health collections (e.g., Mental Health National Minimum Data Sets and the Mental Health National Outcomes and Casemix Collection (NOCC)).
