Person with cancer—number of positive regional lymph nodes, total N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Regional lymph nodes positive
METEOR identifier:	415959
Registration status:	HealthL , Standard 07/12/2011
Definition:	The total number of regional lymph nodes reported to contain tumour in a person with cancer.
Data Element Concept:	Person with cancer—number of positive regional lymph nodes
Value Domain:	Total number N[N]

Value domain attributes

Representational attributes

Representation class:	Total	
Data type:	Number	
Format:	N[N]	
Maximum character length:	2	
	Value	Meaning
Supplementary values:	99	Not stated/inadequately described

Data element attributes

Collection and usage attributes

Guide for use:	<p>A list of which lymph nodes are defined as regional lymph nodes for each cancer site may be found in the current edition of the TNM Classification of Tumours, UICC (International Union Against Cancer) and the AJCC (American Joint Committee on Cancer) Cancer Staging Manual.</p> <p>The number includes all positive nodes regardless of whether they were removed and examined at a single or multiple procedures. For example, for breast cancer, record the sum of positive nodes detected in node sampling/sentinel node biopsy and those removed at axillary clearance.</p>
Collection methods:	<p>The information should be obtained from the patient's medical record.</p> <p>For cancer registries, collection of this data item should only be from notification and pathology reports relating to initial diagnosis and not for recurrent or metastatic disease.</p>
