National Indigenous Reform Agreement: PI 12- Proportion of babies born of low birth weight, 2011

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI 12-Proportion of babies born of low birth weight, 2011
METEOR identifier:	425771
Registration status:	Indigenous , Superseded 01/07/2012
Description:	The incidence of low birth weight among live-born babies, of mothers by Indigenous status.
Rationale:	Low birth weight is associated with increased risk of poor health and death during infancy and increased prevalence of a number of chronic diseases in adulthood. Low birth weight is a particular issue for Indigenous Australians.
Indicator set:	National Indigenous Reform Agreement (2011) Indigenous , Superseded 01/07/2012
Outcome area:	Indigenous children are born and remain healthy Indigenous , Standard 21/07/2010

Collection and usage attributes

Computation description:	Rate ratios and rate differences are calculated for Indigenous:non-Indigenous. Presentation: Per 100 infants (percentage). Definitions: 'Birth' includes births if the birthweight was at least 400 grams or the gestational age was 20 weeks or more. Excludes unknown birthweight and unknown gestational age. 'Low birth weight' is defined as less than 2500 grams.
Computation:	100 x (Numerator ÷ Denominator).
Numerator:	Number of low birth weight singleton infants.

[Perinatal NMDS 2008-2010](#)

Guide for use

Data source type: Administrative by-product data

Comments:

Most recent data available for 2011 CRC report is 2008.

Aggregated data (2006 to 2008) will be reported for the current reporting period.

Single year data (2007,2008) will be reported for time series.

Currently available data on Indigenous status of infants is based solely on the Indigenous status of the mother.

Disaggregation by Indigenous status is recommended to be reported using three-year combined data for the current reporting period due to the small number of low birthweight infants born to Indigenous mothers each year. Single year data is to be reported for time series.

Baseline year for this indicator is 2008; target year is 2018.

Representational attributes

Representation class: Percentage

Data type: Real

Unit of measure: Person

Format: N[N].N

Indicator conceptual framework

Framework and dimensions: [Health Conditions](#)

Data source attributes
