## Collection and usage attributes

<b>Computation description:</b>	Injury and poisoning diagnoses are defined by ICD-10-AM codes S00-T98.  Rates are directly age-standardised to the 2001 Australian population.  Analysis by state and territory is based on location of service.  Analysis by remoteness and SEIFA Index of Relative Socioeconomic Disadvantage (IRSD) is based on usual residence of person.  Presented per 1,000 population.
<b>Computation:</b>	$1,000 \times (\text{Numerator} \div \text{Denominator})$
<b>Numerator:</b>	Number of separations with a principal diagnosis of injury and poisoning

**Disaggregation:**

2009–10—Nationally, by SEIFA Index of Relative Socioeconomic Disadvantage (IRSD) deciles

2007–08 (requested by COAG Reform Council) and 2009–10—Nationally, by remoteness and sex

2007–08 (resupplied for revised Indigenous and SEIFA analysis), and 2009–10—State and territory, by:

- sex
- Indigenous status
- remoteness (Australian Standard Geographical Classification Remoteness Structure)
- SEIFA IRSD quintiles
- age group (0–14; 15–24; 25–34; 35–44; 45–54; 55–64; 65 years and over)

Some disaggregation may result in numbers too small for publication. National disaggregation by Indigenous status will be based on data only from jurisdictions for which the quality of Indigenous identification is considered acceptable.

Used for disaggregation by remoteness and SEIFA IRSD

**Comments:** Most recent data available for 2012 CRC reporting: 2009–10.

The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.

For further detailed analysis by Indigenous status see the National Indigenous Reform Agreement (NIRA) report.
