Cancer treatment—treatment complication outcome, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Treatment complication outcome
METEOR identifier:	467416
Registration status:	HealthI , Standard 04/02/2015
Definition:	The outcome of a treatment complication (adverse event) during a person's treatment for cancer, as represented by a code.
Data Element Concept:	Cancer treatment—treatment complication outcome
Value Domain:	Immediate/short-term cancer treatment complication outcome code N

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Adverse events/toxicities that limited the treatment dose
	2	Adverse events/toxicities that delayed treatment
	3	Adverse events/toxicities that adversely affected performance status post treatment
Supplementary values:	8	Unknown
	9	Adverse events/toxicities but they are inadequately described

Source and reference attributes

Submitting organisation: Cancer Australia

Data element attributes

Collection and usage attributes

Guide for use: Record the outcome of a treatment complication ([adverse event](#)) during a person's treatment for cancer.

This item can be recorded multiple times if an adverse event has multiple effects on treatment, or for multiple adverse events.

Collection methods: Collect from patient medical records.

Source and reference attributes

Submitting organisation: Cancer Australia
