# Episode of care—inter-hospital contracted patient status, code N

## Identifying and definitional attributes

<b>Metadata item type:</b>	Data Element
<b>Short name:</b>	Inter-hospital contracted patient
<b>METEOR identifier:</b>	472024
<b>Registration status:</b>	<a href="#">Health!</a> , Superseded 05/10/2016
<b>Definition:</b>	An episode of care for an admitted patient whose treatment and/or care is provided under an arrangement between a hospital purchaser of hospital care (contracting hospital) and a provider of an admitted service (contracted hospital), and for which the activity is recorded by both hospitals, as represented by a code.

## Data element concept attributes

### Identifying and definitional attributes

<b>Data element concept:</b>	<a href="#">Episode of care—inter-hospital contracted patient status</a>
<b>METEOR identifier:</b>	269715
<b>Registration status:</b>	<a href="#">Health!</a> , Superseded 05/10/2016
<b>Definition:</b>	An episode of care for an admitted patient whose treatment and/or care is provided under an arrangement between a hospital purchaser of hospital care (contracting hospital) and a provider of an admitted service (contracted hospital), and for which the activity is recorded by both hospitals.
<b>Context:</b>	Admitted patient care:  To identify patients receiving services that have been contracted between hospitals. This metadata item is used to eliminate potential double-counting of hospital activity in the analysis of patterns of health care delivery and funding and epidemiological studies.
<b>Object class:</b>	<a href="#">Episode of care</a>
<b>Property:</b>	<a href="#">Inter-hospital contracted patient status</a>

## Value domain attributes

### Identifying and definitional attributes

<b>Value domain:</b>	<a href="#">Inter-hospital contracted patient sector code N</a>
<b>METEOR identifier:</b>	472030
<b>Registration status:</b>	<a href="#">Health!</a> , Standard 11/04/2012
<b>Definition:</b>	A code set representing whether an inter-hospital contracted patient is contracted to or from a hospital in the public or the private sector.

## Representational attributes

<b>Representation class:</b>	Code
<b>Data type:</b>	Number
<b>Format:</b>	N
<b>Maximum character length:</b>	1

	Value	Meaning
<b>Permissible values:</b>		Contracted (destination) hospital
	1	Inter-hospital contracted patient from public sector hospital
	2	Inter-hospital contracted patient from private sector hospital
	3	Contracting (originating) hospital
	4	Inter-hospital contracted patient to public sector hospital
<b>Supplementary values:</b>	5	Inter-hospital contracted patient to private sector hospital
	9	Not inter-hospital contracted
		Not stated

## Data element attributes

### Collection and usage attributes

#### Guide for use:

Hospital activity provided under contract is to be reported by both the contracting (originating) hospital and by the contracted (destination) hospital, where the activity is recorded by both hospitals.

A specific arrangement should apply (either written or verbal) whereby one hospital contracts with another hospital for the provision of specific services. The arrangement may be between any combination of hospital; for example, public to public, public to private, private to private, or private to public.

This data element is designed to enable elimination of double counting of episodes of admitted patient care in national data compiled as per the APC NMDS. As such, contracted arrangements where the patient is only admitted to one hospital (i.e. contract type 4 where contract role=A) are not considered to be inter-hospital contracted care for the purposes of this data element. In contracted arrangements where the patient is admitted to both hospitals, provide data according to the guide for use below. In contracted arrangements where the patient is only admitted to one hospital, use code 5.

This data element item will be derived, using data elements [Hospital—contract role, code A](#) and [Hospital—contract type, code N](#) as follows.

If Contract role = B (Hospital B, that is, the provider of the hospital service; contracted hospital), and Contract type = 2, 3, or 5 (that is, a hospital (Hospital A) purchases the activity, rather than a health authority or other external purchaser, and admits the patient for all or part of the episode of care, and/or records the contracted activity within the patient's record for the episode of care). Then record a value of 1, if Hospital A is a public hospital or record a value of 2, if Hospital A is a private hospital.

If Contract role = A (Hospital A, that is, the hospital purchasing the activity; contracting hospital), and Contract type = 2, 3, or 5 (that is, the reporting hospital purchases the activity and admits the patient for all or part of the episode of care, and/or records the contracted activity within the patient's record for the episode of care). Then record a value of 3, if Hospital B is a public hospital or record a value of 4, if Hospital B is a private hospital.

#### Collection methods:

All services provided at both the originating and destination hospitals should be recorded and reported by both hospitals. The destination hospital should record the admission as an 'Inter-hospital contracted patient' so that these services can be identified in the various statistics produced about hospital activity.
