Indigenous primary health care: PI20b-Proportion of regular clients aged 35 years and over who have had an absolute cardiovascular disease risk assessment recorded, 2014

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	PI20b-Proportion of regular clients aged 35 years and over who have had an absolute cardiovascular disease risk assessment recorded, 2014
METEOR identifier:	481576
Registration status:	Health! , Retired 13/03/2015 Indigenous , Superseded 13/03/2015
Description:	Proportion of regular clients who are Indigenous, aged 35 years and over, are not recorded as having cardiovascular disease (CVD) and who have had an absolute CVD risk assessment recorded within the previous 2 years.
Rationale:	Rates of CVD are 30% higher among Indigenous Australians than among non-Indigenous Australians. Multiple risk factors contribute to CVD, most of which are preventable. An assessment of CVD risk based on multiple risk factors is more accurate than an assessment of individual risk factors due to the cumulative effect of risk factors that may be additive or synergistic. Given that an absolute risk assessment provides a more accurate assessment of risk than individual risk factors, it is reasonable to expect that basing management decisions on this assessment will improve outcomes.
Indicator set:	Indigenous primary health care key performance indicators (2014) Health! , Superseded 13/03/2015 Indigenous , Superseded 13/03/2015

Collection and usage attributes

Population group age from:	35 years				
Computation description:	Proportion of regular clients who are Indigenous, aged 35 years and over, are not recorded as having CVD and who have had an absolute CVD risk assessment recorded within the previous 2 years. 'Regular client' refers to a client of an OATSIH-funded primary health care service (that is required to report against the Indigenous primary health care key performance indicators) who has an active medical record; that is, a client who has attended the OATSIH-funded primary health care service at least 3 times in 2 years. Presented as a percentage.				
Computation:	$(\text{Numerator} \div \text{Denominator}) \times 100$				
Numerator:	Number of regular clients who are Indigenous, aged 35 years and over, are not recorded as having CVD and who have had an absolute CVD risk assessment recorded within the previous 2 years.				
Numerator data elements:	<table border="1"><tr><td>Data Element / Data Set</td></tr><tr><td>Person—Indigenous status, code N</td></tr><tr><td>Data Source</td></tr><tr><td>Indigenous primary health care data collection</td></tr></table>	Data Element / Data Set	Person—Indigenous status, code N	Data Source	Indigenous primary health care data collection
