Female—parity, total pregnancies N[N]

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Parity
METEOR identifier:	501710
Registration status:	<u>Health!</u> , Superseded 12/12/2018 <u>Tasmanian Health</u> , Superseded 03/07/2020
Definition:	The total number of previous pregnancies experienced by the woman that have resulted in a <u>live birth</u> or a <u>stillbirth</u> .
Context:	Perinatal statistics.
Data Element Concept:	Female—parity
Value Domain:	Total pregnancies N[N]

Value domain attributes

Representational attributes

Representation class:	Total	
Data type:	Number	
Format:	N[N]	
Maximum character length:	2	
	Value	Meaning
Supplementary values:	Value 99	Meaning Not stated

Data element attributes

Collection and usage attributes

Guide for use:	To calculate parity, count all previous pregnancies that resulted in a live birth or a stillbirth of at least 20 weeks gestation or at least 400 grams birthweight. Excluded from the count are:
	 the current pregnancy pregnancies resulting in spontaneous or induced abortions before 20 weeks gestation ectopic pregnancies.
	A primipara (a woman giving birth for the first time) has a parity of 0.
Collection methods:	A pregnancy with multiple fetuses is counted as one pregnancy.
Comments:	The number of previous pregnancies that resulted in a birth is an important component of the woman's reproductive history. Parity may be a risk factor for adverse maternal and perinatal outcomes.
