Data element attributes

Collection and usage attributes

Guide for use: To calculate parity, count all previous pregnancies that resulted in a live birth or a stillbirth of at least 20 weeks gestation or at least 400 grams birthweight. Excluded from the count are:

- the current pregnancy
- pregnancies resulting in spontaneous or induced abortions before 20 weeks gestation
- ectopic pregnancies.

A primipara (a woman giving birth for the first time) has a parity of 0.

Collection methods: A pregnancy with multiple fetuses is counted as one pregnancy.

Comments: The number of previous pregnancies that resulted in a birth is an important component of the woman's reproductive history. Parity may be a risk factor for adverse maternal and perinatal outcomes.
