Patient—tympanic membrane perforation location, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Tympanic membrane perforation location (code)
METEOR identifier:	505084
Registration status:	Indigenous , Standard 05/09/2014
Definition:	The location of a perforation in the patient's tympanic membrane , as represented by a code.
Data Element Concept:	Patient—tympanic membrane perforation location
Value Domain:	Tympanic membrane perforation location code N

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N
Maximum character length:	1

	Value	Meaning
Permissible values:	1	Central
	2	Marginal
	3	Attic
Supplementary values:	8	Unknown
	9	Not stated/inadequately described

Collection and usage attributes

Guide for use:	The tympanic membrane is divided into three main areas; central, marginal and attic. CODE 1 Central The perforation does not involve the annulus and is bound on all sides by the remnant of the tympanic membrane. CODE 2 Marginal The perforation involves the annulus of the tympanic membrane. CODE 3 Attic The perforation is located in the small, triangular, flaccid portion of the tympanic membrane.

Implementation in Data Set Specifications: [Ear diagnosis cluster](#)
[Indigenous](#), Standard 05/09/2014

Implementation start date: 01/04/2012

Conditional obligation: Conditional on a 'no' response to Patient- intact tympanic membrane indicator.

DSS specific information: This data element has a maximum occurrence of 2. The first occurrence is reported for the right ear and the second occurrence is reported for the left ear.

[Pre-operative examination of ear cluster](#)
[Indigenous](#), Standard 05/12/2017

Conditional obligation:

Conditional on a 'yes' response to [Patient—tympanic membrane perforation indicator, yes/no code N](#).

DSS specific information:

In this data set, code 8 is used to record when the data is invalid and code 9 is used to record when the data is missing.
