Perinatal NMDS 2014-18

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	517456
Registration status:	Health!, Superseded 02/08/2017
DSS type:	National Minimum Data Set (NMDS)
Scope:	The scope of the Perinatal national minimum data set (NMDS) is all births in Australia in hospitals, birth centres and the community. The data set includes information on all births, both <u>live births</u> and <u>stillbirths</u> , of at least 20 weeks gestation or 400 grams birth weight.
	These data have two dimensions, which are the baby and the mother. All data relevant to the birth are conveyed in relation to one of these.

Collection and usage attributes

Collection methods:	National reporting arrangements
	State and territory health authorities provide the data to the Australian Institute of Health and Welfare for national collation, on an annual basis.
	Periods for which data are collected and nationally collated
	Financial years ending 30 June each year.
Implementation start date:	01/07/2014
Implementation end date:	30/06/2018
Comments:	Glossary items
	Glossary terms that are relevant to this National minimum data set are included here.
	Anaesthesia
	Analgesia
	Antenatal care visit
	<u>Birthweight</u>
	Geographic indicator
	Hospital-in-the-home care
	Live birth
	Registered nurse
	Separation
	Stillbirth (fetal death)

Met	adata items in thi	s Data Set Specification		
Seq No.	Metadata item		Obligation	Max occurs
-	Birth event-anaesthesia	a administered indicator, yes/no code N	Mandatory	1
-	Birth event-analgesia a	dministered indicator, yes/no code N	Mandatory	1
-	Birth event—birth method	<u>d, code N</u>	Mandatory	1
	DSS specific inform	ation:		
	In the case of multiple	births, this item should be recorded for each baby born.		
-	Birth event—birth pluralit	<u>y. code N</u>	Mandatory	1
	DSS specific inform	ation:		
	This item is collected	for the mother only.		
-	Birth event—birth preser	ntation, code N	Mandatory	1
	DSS specific inform	ation:		
	In the case of multiple	births, this item should be recorded for each baby born.		

Seq No.	Metadata item	Obligation	Max occurs
-	Birth event—labour onset type, code N	Mandatory	1
	DSS specific information:		
	How labour commenced is closely associated with method of birth and maternal and neonatal morbidity. Induction rates vary for maternal risk factors and obstetric complications and are important indicators of obstetric intervention.		
	This item is collected for the mother only.		
-	Birth event—setting of birth (actual), code N	Mandatory	1
	DSS specific information:		
	Used to analyse the risk factors and outcomes by place of birth. While most deliveries occur within hospitals, an increasing number of births now occur in other settings. It is important to monitor the births occurring outside hospitals and to ascertain whether or not the actual place of delivery was planned.		
	This item is collected for the mother only.		
-	Birth event—state/territory of birth, code N	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Birth event—type of anaesthesia administered, code N[N]	Conditional	7
	Conditional obligation:		
	This data element is to only be reported in cases where anaesthesia was administered to the mother during the birth event.		
-	Birth event—type of analgesia administered, code N[N]	Conditional	6
	Conditional obligation:		
	This data element is to only be reported in cases where analgesia was administered to the mother during the birth event.		
-	Birth—Apgar score (at 5 minutes), code NN	Mandatory	1
	DSS specific information:		
	Required to analyse pregnancy outcome, particularly after complications of pregnancy, labour and birth. The Apgar score is an indicator of the health of a baby.		
	In the case of multiple births, this item should be recorded for each baby born.		

1

Mandatory

- Birth—birth order, code N

DSS specific information:

Birth order is only assigned to births that are in scope for the Perinatal NMDS (i.e. births of at least 20 weeks gestation or 400g birth weight). In the case of multiple pregnancies, if one or more fetuses were removed from the uterus before 20 weeks gestation, for example, by abortion (spontaneous, induced or fetal reduction), they are not considered in the assignment of birth order for any remaining fetuses that are born. For example, in a twin pregnancy, where one fetus is aborted before 20 weeks, no birth order would be recorded for that twin. If the remaining twin is born and is in scope for the Perinatal NMDS, then their birth order would be recorded as '1 Singleton or first of a multiple birth'. If both twins are born and are in scope for the Perinatal NMDS, the first twin will be assigned a birth order of '2 Second of a multiple birth'.

In the case of multiple births, this item should be recorded for each baby born.

- Birth—birth status, code N

DSS specific information:

Essential to analyse outcome of pregnancy.

In the case of multiple births, this item should be recorded for each baby born.

- Birth—birth weight, total grams NNNN

DSS specific information:

For the provision of state and territory hospital data to Commonwealth agencies this metadata item must be consistent with diagnoses and procedure codes for valid grouping.

Weight is an important indicator of pregnancy outcome, is a major risk factor for neonatal morbidity and mortality and is required to analyse perinatal services for high-risk infants.

This metadata item is required to generate Australian National Diagnosis Related Groups.

In the case of multiple births, this item should be recorded for each baby born.

- Episode of admitted patient care—separation date, DDMMYYYY

DSS specific information:

For the provision of state and territory hospital data to Commonwealth agencies this field must:

- be <= last day of financial year
- be >= first day of financial year
- be >= Admission date

This item is collected once for the mother and once for the baby.

- Establishment—organisation identifier (Australian), NNX[X]NNNNN

Mandatory 1

Mandatory 2

DSS specific information:

This item is collected for the mother only.

Mandatory 1

Mandatory 1

Seq No.	Metadata item	Obligation	Max occurs
-	Female (mother)—postpartum perineal status, code N[N]	Mandatory	2
-	Female (pregnant)—number of cigarettes smoked (per day after 20 weeks of pregnancy), number N[NN]	Conditional	1
	Conditional obligation:		
	The data element is only to be recorded if the response to the <u>Female (pregnant)</u> <u>—tobacco smoking indicator (after twenty weeks of pregnancy), yes/no code N</u> data element is Yes.		
	DSS specific information:		
	This item is collected for the mother only.		
-	Female (pregnant)—tobacco smoking indicator (after twenty weeks of pregnancy), yes/no code N	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Female (pregnant)—tobacco smoking indicator (first twenty weeks of pregnancy), yes/no code N	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Female—caesarean section at most recent previous birth indicator, code N	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Female—number of antenatal care visits, total N[N]	Mandatory	1
-	Female—parity, total pregnancies N[N]	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Person—area of usual residence, statistical area level 2 (SA2) code (ASGS 2016) N(9)	Mandatory	1
	DSS specific information:		
	This item is collected for the mother only.		
-	Person—country of birth, code (SACC 2016) NNNN	Mandatory	
-	Person—date of birth, DDMMYYYY	Mandatory	2
	DSS specific information:		

This item is collected once for the mother and once for the baby.

-			
Seq No.	Metadata item	Obligation	Max occurs
-	Person—Indigenous status, code N	Mandatory	2
	DSS specific information:		
	This item is collected once for the mother and once for the baby.		
-	Person—person identifier, XXXXXX[X(14)]	Mandatory	2
	DSS specific information:		
	This item is collected once for the mother and once for the baby.		
-	Person—sex, code N	Mandatory	1
		mandatory	
	DSS specific information:		
	In the case of multiple births, this item should be recorded for each baby born.		
-	Pregnancy—estimated duration (at the first visit for antenatal care), completed weeks	Mandatory	1
	<u>N[N]</u>		
	DSS specific information:		
	This item is collected for the mother only.		
-	Product of conception—gestational age, completed weeks N[N]	Mandatory	1
		manadory	
	DSS specific information:		

The first day of the last menstrual period (LMP) is required to estimate gestational age, which is a key outcome of pregnancy and an important risk factor for neonatal outcomes. Although the date of the LMP may not be known, or may sometimes be erroneous, estimation of gestational age based on clinical assessment may also be inaccurate. Both methods of assessing gestational age are required for analysis of outcomes.

This item is collected for the mother only.
