Person—gender, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Gender
Synonymous names:	Gender identity
METEOR identifier:	521492
Registration status:	Indigenous , Standard 05/09/2014
Definition:	The behavioural, cultural or psychological traits typically associated with a specific sex indicating the sex with which the individual considers or desires to be associated, as represented by a code.
Data Element Concept:	Person—gender
Value Domain:	Gender code N

Value domain attributes

Representational attributes

Representation class:	Code	
Data type:	Number	
Format:	N	
Maximum character length:	1	
	Value	Meaning
Permissible values:	1	Male
	2	Female
	3	Gender other/diverse
Supplementary values:	9	Not stated/inadequately described

Collection and usage attributes

Guide for use:	CODE 3 Gender other/diverse
	This code may include a person that does not fall within the traditional binary notions of sex and gender (male and females). This may include people who identify as a gender different to their birth sex or as neither male nor female. Other terms commonly associated include trans, transgender, transsexual, gender queer, pan-gendered, androgynous and inter-gender. Some cultures may have their own terms for gender identities outside male and female.
Comments:	The Australian Bureau of Statistics has commenced a review of its Sex Standard . See Review of the Sex Standard/Potential new Gender Standard .

Source and reference attributes

Origin:	Australian Government guidelines on the recognition of sex and gender. Attorney-General's Department. Commonwealth of Australia July 2013.

Data element attributes

Collection and usage attributes

Guide for use: Gender is not the same as Sex which is determined by biology. A person's sex and gender may not necessarily be the same. A person's preferred gender may or may not correspond with the sex or gender assigned at birth.

Gender is included as an identifier to support identification and communication with individuals and represents the gender to which the person prefers to be associated.

The preferred Australian Government approach is to collect and use gender information. Information regarding sex would ordinarily not be required. Departments and agencies should ensure when they collect sex and/or gender information they use the correct terminology for the information they are seeking.

Collection methods: Codes 1 (Male), 2 (Female) and 3 (Intersex/indeterminate) may be mapped to M and F and X respectively for collection purposes, however, they should be stored within information systems as codes 1 and 2 and 3 as above.

Information about a person's sex should only be collected where there is a legitimate need for that information, e.g. if a service or benefit to be provided to the individual is directly related to biological sex. However, the necessity of a medical service or associated benefit should be determined by the physical need regardless a person's recorded sex and/or gender.
