National Indigenous Reform Agreement: PI 05-Prevalence of overweight and obesity, 2014

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: PI 05-Prevalence of overweight and obesity, 2014

METEOR identifier: 525842

Registration status: <u>Indigenous,</u> Superseded 24/11/2014

Description: Prevalence of overweight and obesity among Australians, by Indigenous status.

Rationale: High body mass accounted for 11% of burden of disease in 2003. Obesity is

closely associated with risk factors for the main causes of morbidity and mortality

among Aboriginal and Torres Strait Islander peoples.

Indicator set: National Indigenous Reform Agreement (2014)

Indigenous, Superseded 24/11/2014

Outcome area: Indigenous people remain healthy and free of preventable disease

Indigenous, Standard 21/07/2010

Data quality statement: National Indigenous Reform Agreement: PI 05-Prevalence of overweight and

obesity, 2014 QS

Indigenous, Superseded 17/02/2016

Collection and usage attributes

Population group age

from:

18 years

Computation description: Crude rates are calculated for Indigenous Australians.

Age-standardised rates are calculated for Indigenous and non-Indigenous

Australians.

95% confidence intervals and relative standard errors are calculated for crude and

age-standardised rates.

Rate ratios and rate differences are calculated for Indigenous:non-Indigenous

(using age-standardised rates).

Presentation:

Number, rate per 100 persons (percentage), rate ratio, rate difference, confidence

intervals, and relative standard error.

Body Mass Index categories to be reported: obese, overweight, normal,

underweight.

Computation: Crude rate: 100 x (Numerator ÷ Denominator).

Age-standardised rate: calculated using the direct method with the 2001 Australian population as at 30 June as the standard. Ten year age groups are used from 0-4 years to 55 years and over to be consistent with estimates published by the ABS.

Rate ratio: Indigenous age-standardised rate divided by non-Indigenous age-

standardised rate.

Rate difference: Indigenous age-standardised rate minus non-Indigenous age-

standardised rate.

Numerator:

People aged 18 years or over with a Body Mass Index (BMI) greater than $30.00\,$

(obese).

People aged 18 years or over with a BMI of 25.00-29.99 (overweight).

People aged 18 years or over with a BMI of 18.50-24.99 (normal range).

People aged 18 years or over with a BMI less than 18.50 (underweight).

Comments:

Most recent data available for 2014 report: NATSIHS component of the 2012-13 AATSIHS (Indigenous); The core component of the 2011-12 AHS (non-Indigenous). Data disaggregated by remoteness to be resupplied for 2004-05 to provide a comparable time series.

New data to be reported by BMI categories (obese, overweight, normal, underweight).

At this stage, data are available for persons aged 2 years and over. Data from the AATSIHS are available for remote and very remote areas. The AHS does not cover very remote areas.

Baseline year for NIRA target (Close the life expectancy gap within a generation) is 2006; baseline year for this indicator is 2004-05; target year is 2031.
