National Health Performance Authority, Healthy Communities: Life expectancy, 2009–2011

Identifying and definitional attributes

Metadata item type:	Indicator
Indicator type:	Indicator
Short name:	Life expectancy at birth
METEOR identifier:	527641
Registration status:	National Health Performance Authority (retired) , Retired 01/07/2016
Description:	The average number of years a person could expect to live if they experienced the age/sex specific death rates that applied at their birth throughout their lifetime.
Indicator set:	National Health Performance Authority: Healthy Communities: 2011– National Health Performance Authority (retired) , Retired 01/07/2016

Collection and usage attributes

Computation description:	Life expectancy for total population is calculated for a rolling 3-year period and reported annually. Presented as: -number of years -difference between male and female life expectancies at birth (total population).						
Computation:	Calculated using customised life tables produced by the ABS. Life expectancy at birth for Medicare Locals and at higher levels have been calculated with reference to state/territory and Australian life tables (where appropriate), using Brass' Logit System. Brass' Logit technique enables the calculation of smooth abridged life tables for regions which may have a small number of deaths, by adjusting the age-specific death rates with reference to a standard life table. The technique does not alter the overall level of mortality, but the age-specific functions of the life table are smoothed.						
Numerator data elements:	<table><tr><th>Data Element / Data Set</th></tr><tr><td>Person—life expectancy, total years N[NN]</td></tr><tr><td>Data Source</td></tr><tr><td>ABS Life Tables</td></tr><tr><td>Guide for use</td></tr><tr><td>Data source type: Census based and administrative by-product data</td></tr></table>	Data Element / Data Set	Person—life expectancy, total years N[NN]	Data Source	ABS Life Tables	Guide for use	Data source type: Census based and administrative by-product data
Data Element / Data Set							
Person—life expectancy, total years N[NN]							
Data Source							
ABS Life Tables							
Guide for use							
Data source type: Census based and administrative by-product data							
Disaggregation:	By Sex, Medicare Local catchments and Medicare Local peer groups						

Disaggregation data elements:

Data Element / Data Set

[Person—sex, code N](#)

Data Element / Data Set

[Administrative health region—Medicare Local identifier, code AANN](#)

Data Element / Data Set

[Administrative health region—Medicare Local peer group, code N](#)

Representational attributes

Representation class: Mean (average)
Data type: Real
Unit of measure: Time (e.g. days, hours)
Format: NN.N

Indicator conceptual framework

Framework and dimensions:

[PAF-Effectiveness](#)

- [PAF-Appropriateness](#)
- [PAF-Effectiveness of access](#)
- [PAF-Quality](#)
 - [PAF-Capability](#)
 - [PAF-Continuity](#)
 - [PAF-Responsiveness](#)
 - [PAF-Safety](#)
- [PAF-Sustainability](#)
