National Bowel Cancer Screening Program: Pl 06a-Colorectal cancer detection rate

Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

Short name: National Bowel Cancer Screening Program colorectal cancer detection rate

Synonymous names: NBCSP colorectal cancer detection rate

METEOR identifier: 533393

Registration status: Health!, Superseded 06/09/2018

Description: The percentage of people who returned a valid National Bowel Cancer Screening

Program (NBCSP) screening test in a 12-month period and were diagnosed with a screen-detected colorectal cancer, measured 12 months after the defined period.

Rationale: The NBCSP aims to maximise the early detection of colorectal cancer in the target

population.

This can be achieved by detecting cases of colorectal cancer before a person has symptoms, enabling early intervention. The cancer detection rate is a key indicator of program effectiveness, especially when comparing this rate to the known colorectal cancer incidence rate in the target population. Monitoring the cancer detection rate by various stratifications may also reveal emerging positive or negative trends that need to be investigated and rectified if necessary.

To reduce the effect of any lag time between invitation, positive screen, diagnostic assessment and histopathology, this indicator includes all those who screened in the defined period, not all those invited in the defined period (who had a positive

screen).

Indicator set: National Bowel Cancer Screening Program performance indicators 2014–2018

Health!, Superseded 06/09/2018

Collection and usage attributes

Computation: 10,000 x (Numerator ÷ Denominator)

Numerator: The number of people who returned a valid NBCSP screening test in a <u>defined 12-</u>

month period who were diagnosed with a screen-detected colorectal cancer

within the defined period or the following 12 months.

Numerator data elements:

—Data Element / Data Set-

Patient—cancer status, code N

Data Source

National Bowel Cancer Screening Program (NBCSP)

NMDS / DSS

Disaggregation:

Items will be presented by sex and age group, by:

- State and territory
- Socioeconomic status
- Remoteness area
- Indigenous status
- Main language spoken at home
- Disability status
- · Disease screening invitation round
- Diagnostic assessment type
- Election status

Some disaggregation may result in numbers too small for publication.

Disaggregation data elements:

- Data Element / Data Set-

Person—Australian state/territory identifier, code N
