Cancer treatment—immunotherapy completion date, DDMMYYYY

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Immunotherapy completion date
METEOR identifier:	561360
Registration status:	Health! , Standard 08/05/2014
Definition:	The completion date of immunotherapy administered during the course of treatment for cancer, expressed as DDMMYYYY.
Data Element Concept:	Cancer treatment—immunotherapy completion date
Value Domain:	Date DDMMYYYY

Value domain attributes

Representational attributes

Representation class:	Date
Data type:	Date/Time
Format:	DDMMYYYY
Maximum character length:	8

Data element attributes

Collection and usage attributes

Guide for use:	<p>The completion date of immunotherapy treatment is the date of the last dose administered during the course of treatment.</p> <p>The completion date of immunotherapy treatment is recorded regardless of whether the course of treatment is completed as intended, and regardless of the intent or timing of the immunotherapy.</p> <p>A patient may undergo immunotherapy for an extended period of time.</p> <p>The completion date of the immunotherapy treatment is recorded even if the agent is experimental.</p> <p>Multiple entries are not permitted.</p> <p>Dates of surgical, radiotherapy and other systemic treatments are collected as separate items. However, if a patient receives treatment with a protocol that includes different types of systemic therapy agents, for example, a chemotherapy agent and an immunotherapy agent, record the completion date of treatment in both relevant data items.</p>
Collection methods:	The information should be obtained from the patient's medical record.
Comments:	Collecting the start and finish dates for treatment modalities will enable an estimate of treatment duration.
