## Service Agreement - Department of Health and Human Services Tasmania: 2014, Total time (hours) spent by ambulance presentations in offload delay, 2014

#### Identifying and definitional attributes

Metadata item type: Indicator Indicator type: Indicator

**Short name:** Ambulance offload delay (hours)

**Synonymous names:** Ambulance offload delay; Ambulance ramping

METEOR identifier: 581525

**Registration status:** <u>Tasmanian Health</u>, Superseded 09/12/2016

**Description:** This indicator measures the amount of time, in hours, that ambulance presentation

to an emergency department resulted in offload delay (delay from triage time to handover time of more than 15 minutes). Ambulance offload delay is measured from when triage occurred while the care of the patient was still under the responsibility of ambulance officers until the care was fully transferred to the

emergency department.

Rationale: The Emergency Care Network Steering Committee and the Tasmanian Ambulance

Service set the benchmark of 15 minutes for a safe and timely transfer of a patient

from the care of ambulance crew to emergency department staff.

A patient is considered to have Ambulance Offload Delay (AOD) when they are still under the care of ambulance crew 15 minutes after their arrival to the emergency department. The amount of time spent AOD is set to zero at the 15 minutes mark,

consequently a patient under the care of ambulance crew and located at

the emergency department for 20 minutes would be considered to have an AOD

of 5 minutes.

Indicator set: Service Agreement - Department of Health and Human Services Tasmania: 2014

Tasmanian Health, Superseded 12/12/2016

Outcome area: <u>Emergency Department access</u>

Tasmanian Health, Standard 07/12/2016

#### Collection and usage attributes

**Computation:** The definitions applied were set by the Emergency Care Network Steering

Committee. The definitions include presentations that have been assigned a triage category between 1 and 5. Presentations that are 'dead on arrival' are excluded for

the purpose of calculating this indicator.

Ambulance offload delay is calculated for ambulance presentations by subtracting the date and time the patient was triaged from the date and time the patient was transferred to the care of the emergency department. Ambulance offload delay has

occurred when this figure is greater than 15 minutes (being 15:59).

The amount of ambulance offload delay time is set to zero at the 15 minute mark; consequently a patient who waited for 20 minutes would have an ambulance offload

delay time of 5 minutes.

See Australasian Triage Scale from the Australasian College for Emergency Medicine for a description of each triage category, including indicative clinical

descriptors.

The indicator is presented as total time, in hours.

**Numerator:**Total time of ambulance presentations with delay from triage to handover time

greater than 15 minutes, converted into hours

#### Numerator data elements:

#### Data Element / Data Set-

Establishment—organisation identifier, (Tasmanian) identifier NNNN

#### Data Element / Data Set

Non-admitted patient emergency department service episode—triage category, (Tasmanian) code N

#### Guide for use

Data is obtained from the [TriageCategoryRefld] field in Health Central and includes records with the triage categories from 1 to 5.

#### Data Element / Data Set

Emergency department stay—ambulance offload delay, total minutes NNNNN

#### Guide for use

## Only includes records which ambulance offload delay time is over 15 minutes.

Data is obtained from the following data fields in Health Central:

Calculated by subtracting the date and time the patient has been transferred to the care of emergency department staff minus the date and time the patient was triaged when greater than 15 minutes.

#### Computation methods:

#### **Royal Hobart Hospital**

([StaySegmentEndDateTime] - [TriageStartDateTime]) when > than 15 minutes\* and the [LocationDescription] field is *Ambulance waiting*.

#### **Launceston General Hospital**

([RampEndDateTime] from the FactEmergencyConsultRamping table - [TriageStartDateTime]) when > than 15 minutes\*.

#### North West Regional Hospital and Mersey Community Hospital

([RampEndDateTime] from the FactEmergencyConsultRamping table - [TriageStartDateTime]) when > than 15 minutes\*.

\* an ambulance offload delay time of over 15 minutes being below 15:59 seconds.

Note: A patient with a waiting time (i.e. the time between being triaged at the emergency department but still under the care of the ambulance crew and the time they are attended to by emergency department staff) of 16 minutes, is considered to have has an ambulance offload delay of 1 minute.

#### Data Element / Data Set

Emergency department stay—service delivery location, text X[X(49)]

Guide for use

Computation methods:

**Royal Hobart Hospital** 

Data is obtained from the [LocationDescription] field in Health Central where the location is recorded as *Ambulance waiting*.

Data Element / Data Set

Episode of care—episode identifier, N[NNNNN]

Guide for use

Data is obtained from the [Emergencyldentifier] field in Health Central.

Data Element / Data Set

Emergency department stay—physical departure date, DDMMYYYY

Guide for use

Data is obtained from the [DepartureDateTime] field in Health Central.

Data Element / Data Set

Emergency department stay—physical departure time, hhmm

Guide for use

Data is obtained from the [DepartureDateTime] field in Health Central.

**Denominator:** No denominator

**Disaggregation:** Specified disaggregation: Hospital, triage category and reporting month based on

the date of the end of the emergency department stay

### Disaggregation data elements:

#### Data Element / Data Set-

Establishment—organisation identifier, (Tasmanian) identifier NNNN

#### Data Element / Data Set-

Non-admitted patient emergency department service episode—triage category, (Tasmanian) code N

#### Data Element / Data Set-

Emergency department stay—physical departure date, DDMMYYYY

Guide for use

Data is obtained from the [DepartureDateTime] field in Health Central.

#### Data Element / Data Set-

Emergency department stay—physical departure time, hhmm

Guide for use

Data is obtained from the [DepartureDateTime] field in Health Central.

#### Representational attributes

Representation class: Count

Data type: Real

**Unit of measure:** Time (e.g. days, hours)

Format: NNN[N]

#### **Accountability attributes**

Reporting requirements: • 2014-15 Service Agreement

#### Relational attributes
