Episode of admitted patient care—procedure, code (ACHI 9th edn) NNNNN-NN

Identifying and definitional attributes

| | |
|------------------------------|---|
| Metadata item type: | Data Element |
| Short name: | Procedure |
| METEOR identifier: | 589101 |
| Registration status: | HealthI , Superseded 05/10/2016 Tasmanian Health , Superseded 10/07/2017 |
| Definition: | A clinical intervention represented by a code that: <ul style="list-style-type: none">• is surgical in nature, and/or• carries a procedural risk, and/or• carries an anaesthetic risk, and/or• requires specialised training, and/or• requires special facilities or equipment only available in an acute care setting. |
| Data Element Concept: | Episode of admitted patient care—procedure |
| Value Domain: | Procedure code (ACHI 9th edn) NNNNN-NN |

Value domain attributes

Representational attributes

| | |
|----------------------------------|--|
| Classification scheme: | Australian Classification of Health Interventions (ACHI) 9th edition |
| Representation class: | Code |
| Data type: | String |
| Format: | NNNNN-NN |
| Maximum character length: | 8 |

Data element attributes

Collection and usage attributes

| | |
|----------------------------|--|
| Collection methods: | Record and code all procedures undertaken during the episode of care in accordance with the ACHI (9th edition). Procedures are derived from and must be substantiated by clinical documentation. |
| Comments: | The Independent Hospital Pricing Authority advises the National Health Information Standards and Statistics Committee of relevant changes to the ACHI. |

Source and reference attributes

Implementation in Data Set Specifications:

[Admitted patient care NMDs 2015-16](#)

[Health!](#), Superseded 10/11/2015

Implementation start date: 01/07/2015

Implementation end date: 30/06/2016

DSS specific information:

As a minimum requirement procedure codes must be valid codes from the Australian Classification of Health Interventions (ACHI) procedure codes and validated against the nationally agreed age and sex edits. More extensive edit checking of codes may be utilised within individual hospitals and state and territory information systems.

An unlimited number of diagnosis and procedure codes should be able to be collected in hospital morbidity systems. Where this is not possible, a minimum of 20 codes should be able to be collected.

Record all procedures undertaken during an episode of care in accordance with the ACHI (9th edition) Australian Coding Standards.

The order of codes should be determined using the following hierarchy:

- procedure performed for treatment of the principal diagnosis
- procedure performed for the treatment of an additional diagnosis
- diagnostic/exploratory procedure related to the principal diagnosis
- diagnostic/exploratory procedure related to an additional diagnosis for the episode of care.
