Person—glycosylated haemoglobin level, code N

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Glycosylated haemoglobin level
Synonymous names:	HbA1c level
METEOR identifier:	589601
Registration status:	Health! , Standard 13/03/2015 Indigenous , Standard 13/03/2015
Definition:	A person's glycosylated haemoglobin (HbA1c) level, as represented by a code.
Data Element Concept:	Person—glycosylated haemoglobin level
Value Domain:	Glycosylated haemoglobin level code N

Value domain attributes

Representational attributes

Representation class:	Code
Data type:	Number
Format:	N

	Value	Meaning
Permissible values:	1	Less than or equal to 7% (less than or equal to 53 mmol/mol)
	2	Greater than 7% but less than or equal to 8% (greater than 53 mmol/mol but less than or equal to 64 mmol/mol)
	3	Greater than 8% but less than 10% (greater than 64 mmol/mol but less than 86 mmol/mol)
	4	Greater than or equal to 10% (greater than or equal to 86 mmol/mol)

Source and reference attributes

Submitting organisation: Australian Institute of Health and Welfare (AIHW)

Data element attributes

Collection and usage attributes

Guide for use: Prior to 2013, glycosylated haemoglobin levels were usually recorded as a percentage in Australia. However, the International HbA1c Consensus Committee recommends that the best way to record glycosylated haemoglobin levels is in mmol/mol. This recommendation was supported by the Australasian Association of Clinical Biochemists, the Royal College of Pathologists of Australasia, the Australian Diabetes Educators Association, and the Australian Diabetes Society. Following this, HbA1c results are now being recorded in two ways in clinical systems; as a percentage and as mmol/mol.

HbA1c results should be reported for all clients, regardless of the manner in which their HbA1c is recorded.

Comments: Glycosylated haemoglobin (HbA1c) is an index of average blood glucose level for the previous 2 to 3 months and is used to monitor blood sugar control in people with diabetes.

Conditional obligation:

Conditional on having had a glycosylated haemoglobin measurement result recorded within the previous 6 months or within the previous 12 months.

This item is only collected for persons who have Type II diabetes.

DSS specific information:

In the Indigenous primary health care NBEDS, this data element relates to glycosylated haemoglobin measurement results recorded within the previous 6 months and within the previous 12 months.

[Indigenous-specific primary health care NBEDS December 2020](#)

[Indigenous](#), Standard 14/07/2021

Implementation start date: 01/07/2020

Implementation end date: 31/12/2020

Conditional obligation:

Reporting against this data element is conditional on a person having both:

1. a 'CODE 02 Type 2 diabetes' response to '[Person—diabetes mellitus status, code NN](#)', and
2. a 'CODE 1 Yes' response to '[Person—glycosylated haemoglobin measurement result recorded indicator, yes/no code N](#)', where the result was recorded within the previous 6 months or within the previous 12 months, up to the census date.

DSS specific information:

In the ISPHC NBEDS 'type 2 diabetes' specifically excludes type 1 diabetes, secondary diabetes, gestational diabetes mellitus (GDM), previous GDM, impaired fasting glucose, and impaired glucose tolerance.

Data are provided to the AIHW twice, for glycosylated haemoglobin (HbA1c) measurement results recorded within the previous 6 months and within the previous 12 months (up to the census date.)

Data relating to only the most recently recorded result are provided to the AIHW.
