### Collection and usage attributes

Computation description: Rates directly age-standardised to the 2001 Australian population.

Analyses by state and territory, remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-economic Disadvantage (IRSD) are based on the state or territory and Statistical Area Level 2 (SA2) of the person at the time of their

diagnosis.

Rates that are considered unstable and should be interpreted with caution will be

noted. Rates that are considered very unstable will not be published.

Presented as:

• a number (for state and territory by cancer type disaggregations)

• per 100,000.

**Computation:** 100,000 × (Numerator ÷ Denominator)

Calculated separately for each type of cancer.

**Numerator:** For melanoma, bowel and lung cancer: Number of new cases in the reported year.

For cervical and breast cancer in females: Number of new cases in females in the

reported year.

### Comments:

Most recent data available for 2016 National Healthcare Agreement performance reporting: 2010 for NSW and the ACT, 2012 for all other jurisdictions.

2011 and 2012 data for NSW and the ACT will not be available for inclusion.

2010 data will be resupplied to include incidence rates for NSW and the ACT, which were supplied as estimates in the 2014 and 2015 reports.
