Address communication suppression cluster

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	611161
Registration status:	Health!, Standard 05/10/2016
DSS type:	Data Element Cluster
Scope:	The Address communication suppression cluster defines the data elements used to collect information relating to the suppression of an address, which is defined as a collection of information used for describing the location of an entity, and/or details describing how the entity can be contacted.
	The address may be either a physical address, such as home address, or an electronic address, such as an email address. Any physical or electronic address can be suppressed for a range of administrative, personal and legal reasons.
	An address can be flagged as subject to suppression, in which case it may not be provided, or may be provided subject to **data exchange agreements** not to publish or forward the information.
