Episode of admitted patient care—primary impairment type, code (AROC 2012) NN.NNNN

Exported from METEOR (AIHW's Metadata Online Registry)

Episode of admitted patient care—primary impairment type, code (AROC 2012) NN.NNNN

Identifying and definitional attributes

Metadata item type:	Data Element
Short name:	Primary impairment type (AROC 2012 code)
METEOR identifier:	611876
Registration status:	Tasmanian Health, Superseded 19/01/2018 Health!, Superseded 25/01/2018
Definition:	The impairment which is the primary reason for the admission to the sub-acute episode, as represented by a code.
Data Element Concept:	Episode of admitted patient care—primary impairment type
Value Domain:	Impairment type code (AROC 2012) NN.NNNN

Value domain attributes

Representational attributes

Classification scheme:	Impairment type code (AROC 2012)
Representation class:	Code
Data type:	String
Format:	NN.NNNN
Maximum character length:	7

Source and reference attributes

Submitting organisation:	Independent Hospital Pricing Authority

Data element attributes

Collection and usage attributes

Comments:	In the Australian National Subacute and Non-Acute Patient (AN-SNAP) version 4, the paediatric rehabilitation branch uses impairment codes to group episodes to a specific class. The paediatric impairment codes consist of groups of specific impairment codes that are currently used. For paediatric rehabilitation episodes, use an existing impairment code which most closely describes the paediatric impairment.
