## Collection and usage attributes

**Population group age from:** Women of all ages

### Computation description:

Presented as a number per 100,000 people, age standardised, by Statistical Area level 3.

Analysis by Statistical Area Level 3 (SA3) is based on postcode of usual residence of the patient. The postcode is that which was provided by the patient to the hospital at which they were admitted.

SA3s where the total population was less than 2,500 or where the population of women was less than 200 are excluded from analysis.

Suppression protocol for calculating age standardised rates:

Numerator	Total admissions less than 20 (unrounded)
Denominator	ERP for one or more five year age groups less than 30

**Computation:** 100,000 x (Numerator ÷ Denominator), age standardised

For more information about age-standardisation see

</content/index.phtml/itemId/327276>

**Numerator:** The number of hysterectomy and endometrial ablation surgery admissions to hospital for women in 2012-13.

**Disaggregation:**

Statistical Area Level 3, which have been derived from [Postcode—Australian \(person\)](#):

- Statistical Area Level 3 (SA3s) are geographic areas defined in the ABS Australian Statistical Geography Standard (ASGS). The aim of SA3s is to create a standard framework for the analysis of ABS data at the regional level through clustering groups of SA2s that have similar regional characteristics. There are 333 spatial SA3s covering the whole of Australia without gaps or overlaps. They are designed to provide a regional breakdown of Australia. SA3s generally have a population of between 30,000 and 130,000 people. There are approximately 50 with fewer than 30,000 people and 35 with more than 130,000 as at 30 June 2011. For further information see the ABS publication, Australian Statistical Geography Standard (ASGS): Volume 1 – Main Structure and Greater Capital City Statistical Areas, July 2011 (cat. no. 1270.0.55.001).
