Incarceration history cluster

Exported from METEOR (AIHW's Metadata Online Registry)

Incarceration history cluster

Identifying and definitional attributes

Metadata item type:	Data Set Specification
METEOR identifier:	627173
Registration status:	Health!, Standard 28/04/2016
DSS type:	Data Element Cluster
Scope:	The Incarceration history cluster defines a prison entrant's incarceration history.

Collection and usage attributes

Guide for use:	The Incarceration history cluster combines the two data elements: Prison entrant—type of corrective services facility, code N and Prison entrant—number of times in prison or juvenile detention, total number N[N] to define the number of times a prison entrant has been detained in a juvenile detention centre and /or adult prison.

As this data cluster aims to collect the prison entrant's previous history of incarceration, both data elements may be applicable to the one prisoner. That is, a prisoner may have previously been detained in both a juvenile detention centre (as a juvenile offender) and then in a prison (as an adult offender). |
| **Collection methods:** | Information on a person's incarceration history is collected during the reception assessment on the National Prisoner Health Data Collection Prison Entrants form. |
