Comments:	Most recent data available for 2017 National Healthcare Agreement performance reporting: 2014–15.
	The scope of the National Hospital Morbidity Database (NHMD) is episodes of care for admitted patients in essentially all hospitals in Australia, including public and private acute and psychiatric hospitals, free-standing day hospital facilities, alcohol and drug treatment hospitals and dental hospitals.
	For 2014–15 data, the 2011 SEIFA IRSD quintile and decile data will be produced using the Australian Statistical Geography Standard geographical unit of Statistical Area Level 2.
	Note that for the 2015 and previous reports, disaggregations by public hospital peer group for this indicator were calculated using the peer group classification method as reported in <u>Australian hospital statistics 2010–11</u> .
