# Activity based funding

## Identifying and definitional attributes

<b>Metadata item type:</b>	Glossary Item
<b>Synonymous names:</b>	ABF
<b>METEOR identifier:</b>	651815
<b>Registration status:</b>	<a href="#">Health!</a> , Superseded 25/01/2018
<b>Definition:</b>	A method of funding health services based on amount and type of activity.
<b>Context:</b>	Activity based funding in the context of health is a method of funding hospitals and health services whereby health services are funded for the provision of patient care based on the type and mix of patients they treat. A set amount is paid to the health service based on the relative cost of the group to which the patient is classified.

## Collection and usage attributes

<b>Guide for use:</b>	Activity based funding has three essential elements:  Classification: Allocation of patients treated into groups which allow weightings to be applied. The groups should have resource use homogeneity (patients within a group should cost a similar amount to treat) and be clinically coherent (patients within a group should be clinically similar).  Activity data: Counting the patients treated.  Cost data: Determining the cost of treatment.
