Health of the Nation Outcome Scale 65+

Identifying and definitional attributes

Metadata item type:	Glossary Item
Synonymous names:	HoNOS65+
METEOR identifier:	681544
Registration status:	Health! , Superseded 23/12/2020
Definition:	An assessment of psychiatric symptoms and psychosocial functioning in an older patient.
Context:	Health of the Nation Outcome Scale 65+ (HoNOS 65+) is a clinical assessment tool used by mental health professionals to evaluate psychiatric symptoms and psychosocial functioning in an older patient.

Collection and usage attributes

Guide for use: HoNOS 65+ is designed to be used by clinicians before and after interventions, so that changes attributable to interventions can be measured.

Comments: Twelve scales are used to rate older mental health service users. The scales include:

- Behavioural disturbance
- Non-accidental self injury
- Problem drinking or drug use
- Cognitive problems
- Problems related to physical illness or disability
- Problems associated with hallucinations and delusions
- Problems associated with depressive symptoms
- Other mental and behavioural problems
- Problems with social or supportive relationships
- Problems with activities of daily living
- Overall problems with living conditions
- Problems with work and leisure activities and the quality of the day time environment

Together, the scales rate various aspects of mental and social health, each on a scale of 0 to 4.

0 - No problems within the period stated

1 - Minor problem requiring no action

2 - Mild problem but definitely present

3 - Moderately severe problem

4 - Severe to very severe problem

A HoNOS 65+ total score (the sum of each individual scale item) will be a value between 0 and 48.
