Pregnancy—estimated duration of pregnancy at the first antenatal care visit

Identifying and definitional attributes

Metadata item type: Data Element Concept

METEOR identifier: 695399

Registration status: Tasmanian Health, Standard 03/07/2020

Health!, Superseded 03/12/2020 Indigenous, Superseded 14/07/2021

Definition: The estimated duration of a pregnancy on the day of the first antenatal care visit.

Object Class attributes

Identifying and definitional attributes

Object class: <u>Pregnancy</u>

Definition: The period during which a woman carries a developing fetus, normally in the uterus.

Pregnancy lasts for approximately 266 days, from conception until the baby is born, or 280 days from the first day of the last menstrual period. During pregnancy menstruation is absent, there may be a great increase in appetite, and the breasts increase in size; the woman may also experience morning sickness. These and other changes brought about by a hormone (progesterone) produced at first by the ovary and later by the placenta. Definite evidence of pregnancy is provided by various pregnancy tests, by the detection of the heartbeat of the fetus, and by

ultrasound.
