### Data element attributes

### Collection and usage attributes

Guide for use: To calculate parity, count all previous pregnancies that resulted in a live birth or a

stillbirth of at least 20 weeks gestation or at least 400 grams birthweight. Excluded

from the count are:

the current pregnancy

pregnancies resulting in spontaneous or induced abortions before 20 weeks

· ectopic pregnancies.

A primipara (a female giving birth for the first time) has a parity of 0.

**Collection methods:** A pregnancy with multiple fetuses is counted as one pregnancy.

Comments: The number of previous pregnancies that resulted in a birth is an important

component of the female's reproductive history. Parity may be a risk factor for

adverse maternal and perinatal outcomes.
