# National Healthcare Agreement: Pl 03—Prevalence of overweight and obesity, 2019

## Identifying and definitional attributes

Metadata item type: Indicator

Indicator type: Progress measure

**Short name:** PI 03–Prevalence of overweight and obesity, 2019

METEOR identifier: 698934

**Registration status:** Health!, Superseded 13/03/2020

**Description:** Prevalence of overweight and obesity in adults and children.

Indicator set: National Healthcare Agreement (2019)

Health!, Superseded 13/03/2020

Outcome area: Prevention

Health!, Standard 07/07/2010

## Collection and usage attributes

Computation description: Body Mass Index (BMI) is calculated as weight (in kilograms) divided by the square

of height (in metres).

For adults, underweight is defined as a BMI less than 18.5, normal is defined as a BMI of 18.5 to less than 25.0, overweight is defined as a BMI of 25.0 to less than

30.0 and obese is defined as a BMI of greater than or equal to 30.0.

For children, underweight is defined as a BMI (appropriate for age and sex) that is likely to be less than 18.5 at age 18, normal is defined as a BMI (appropriate for age and sex) that is likely to be 18.5 to less than 25.0 at age 18, overweight is defined as a BMI (appropriate for age and sex) that is likely to be 25.0 to less than 30.0 at age 18 and obese is defined as a BMI (appropriate for age and sex) that is likely to be greater than or equal to 30.0 at age 18, based on centile curves. See *Australian Health Survey: Users' Guide, 2011-13* (ABS cat. no. 4363.0.55.001)

for BMI values.

Rates are directly age-standardised to the 2001 Australian population.

Excludes pregnant women where identified and people with an unknown BMI.

Analysis by remoteness and Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-Economic Disadvantage (IRSD) is based on usual residence of

person.

Presented as a percentage.

95% confidence intervals and relative standard errors calculated for rates.

**Computation:** 100 × (Numerator ÷ Denominator)

Calculated separately for adults and children.

**Numerator:** Adults: Number of persons aged 18 and over who are obese or overweight.

Children: Number of persons aged 5–17 who are obese or overweight.

#### Disaggregation:

For each of adults and children, state and territory, by:

- sex by age (adults only)
- Indigenous status
- remoteness (Australian Statistical Geography Standard (ASGS) Remoteness Structure)
- 2011 Socio-Economic Indexes for Areas (SEIFA) Index of Relative Socio-Economic Disadvantage (IRSD) quintiles
- BMI category (underweight, normal, overweight, obese)
- · disability status

For adults, nationally, by:

- sex by remoteness (ASGS Remoteness Structure)
- 2011 SEIFA IRSD deciles
- remoteness (ASGS Remoteness Structure) by 2011 SEIFA IRSD deciles.

Some disaggregation may result in numbers too small for publication.

Comments: Most recent data available for 2019 National Healthcare Agreement performance

reporting: 2014-15 (total population, non-Indigenous: NHS); 2012-13 (Indigenous

only: NATSISS).

NO NEW DATA FOR 2019 REPORTING.

2014–15 data are based on measured height and weight. BMI derived from measured height and weight is preferable to that derived from self-reported height and weight.
